

NAM system, a.s.

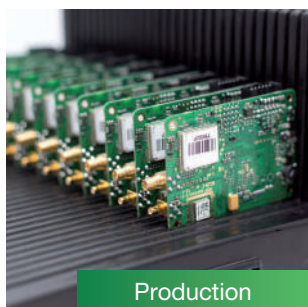

Czech company = 26 years of monitoring technology development

We design and regularly update our own sophisticated hardware and software. We understand our technology. We have been active in the field of monitoring technology for 26 years and during this time we have collected a wide range of experience.

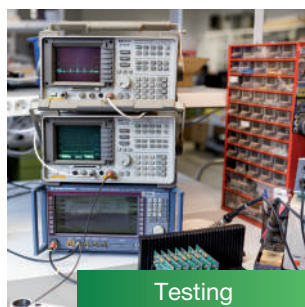

Development

During the development of hardware and software we look for innovative and original solutions. Thanks to this we can supply technology with high added value.

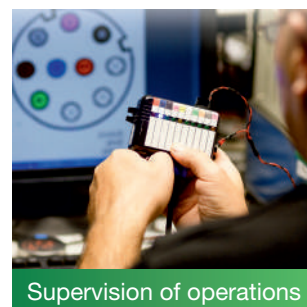

Production

We produce our products ourselves. We employ experienced professionals in our modern production.

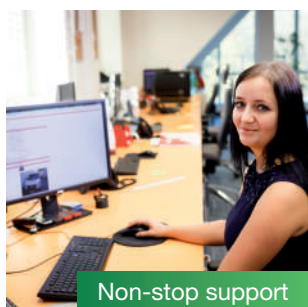

Testing

We are unique in our testing of prototypes and software. Thanks to the great range of technical abilities that we have gained, we are able to identify the sources of problems and to find solutions to these.

Supervision of operations

Our technology includes sophisticated tools for supervision of product functioning and for supervising communication.

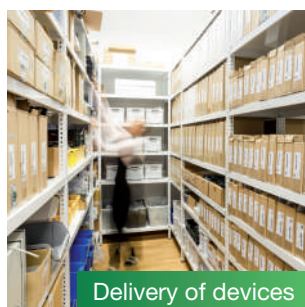

Non-stop support

We have got experienced operators who are available 24/7/365. They can assist you with hardware and software issues and are able to react quickly in difficult situations.

Training

We regularly hold training courses about the operation of the complete system (hardware, software).

Delivery of devices

We have a warehouse here in the Czech Republic from where goods can be immediately sent out.

Quality management

We guarantee high quality, low product failure and two-year guarantee.

26 years tradition in developing and producing technology

We are a respected producer and supplier of our own hardware and software solutions for monitoring technology. We have been on the market since 1990 and our main focus is on security applications. We offer products for monitoring centres and transmission of data in various applications that meet high operational demands.
